

Rent-Finder Platform Backend System Documentation & API Reference

Version: 1.0
Status: Production Ready
Currency: NAD (Namibian Dollar)
Region: Namibia

1. System Overview

The Rent-Finder platform is an escrow-based marketplace that connects busy individuals with rent finders. The system ensures safe payments, controlled payouts, transparent audits, and guaranteed platform revenue.

2. Core Business Rules

- Total client payment: 250 NAD
- Finder payout: 200 NAD
- Platform service fee: 50 NAD (non-refundable)

Escrow is created after lead acceptance, paid before work starts, and finalized through release, cancellation, or dispute resolution.

3. User Roles

- Busy Individual: Pays escrow, verifies tasks, cancels or disputes escrows.
- Rent Finder: Completes tasks, sets payout preferences, views payouts.
- Admin: Resolves disputes, processes payouts, manages revenue dashboards.

4. Escrow Lifecycle

submitted → accepted → escrow_created → paid/held → released | cancelled | disputed → payout processing

5. Authentication

All APIs require JWT authentication using the Authorization Bearer token.

6. API Groups

- Tasks: Verification and task lifecycle
- Escrow: Payment, cancellation, dispute, timeline
- Admin Escrow: Release and refund decisions
- Payouts: Admin processing and finder visibility
- Finance: Platform revenue reporting

7. Financial Safety & Audits

Every financial action is logged using immutable escrow audit logs. Payouts enforce uniqueness per escrow and follow strict admin confirmation rules.

8. Rate Limiting & Security

Sensitive financial endpoints are rate-limited. Admin actions require explicit role enforcement and confirmation-based workflows.

9. Frontend Integration Notes

Frontend applications must never calculate money values. All monetary amounts are sourced directly from the API and displayed clearly in NAD.

10. Deployment Readiness

The system is designed for Namibia, supports manual bank/mobile payouts, avoids Stripe/Paystack dependencies, and is suitable for production launch with real funds.

Appendix: Platform Guarantees

- One payout per escrow enforced at database level.
- Platform service fee always retained.
- No automatic money movement without admin confirmation.
- Full transparency via escrow timelines and dashboards.
